

T-Industry, s.r.o.

Introducing the new standard in training simulations:
Small Target pop-up ZDV_TI

The new small target pop-up ZDV_TI is equipped by latest technology for training simulations. Control and communication are based on the LonWorks control system. This network technology allows complete enhanced operating and monitoring exclusively through existing power infrastructure, which also supplies the device. Finished in rugged metal case according to IP54.

Versatile usage

- all target frames support
- laser target support

Accessories

- integrated shot detector
- illumination and shot imitation outputs
- detonator, safflower and smoke shell connection
- external infrared remote controller

Easy to use

- using existing power line network
- without any cable infrastructure building
- compatible with elder devices
