Introducing the new standard in training simulations:

Small mobile battery target pop-up ZDV_BAT_TI_R2

The new small mobile battery target pop-up ZDV_BAT_TI_R2 is equipped by latest technology for training simulations. Control and communication are based on the RF 868MHz communication technology with full multi-hop support. This network technology allows complete enhanced operating and monitoring over excessive area coverage. The battery units ensures several days of service with complete maintenance.

Finished in rugged metal case according to IP54. Working range up to 4km LoS.

Versatile usage

- all target frames support
- laser target support
- mobile unit

Accessories

- integrated shot detector
- illumination and shot imitation outputs
- detonator, safflower and smoke shell connection
- external infrared remote controller
- Bluetooth / RF convertor for tablet based control
- USB / RF converter for single PC based control
- LonWorks / RF gateway for extending existing wired systems

Easy to use

- flexible placement
- without any cable infrastructure building
- control via handheld devices
- compatible with elder devices
- integration into the classic wired systems
